Product Designer & Product Builder, **7 years** across B2B & B2C SaaS, owning problems end-to-end from brief to shipped product. I care about the **product** as much as the interface: what people actually do with it, what blocks them, what deserves to exist. I talk to **users**, I read usage data, and I use both to decide what gets built and what gets cut. Then I build the systems that hold it together: **token-based design systems**, management dashboards, and field tools where regulated complexity disappears into the interface, not the system. **Strong Figma craft**, from wireframe to **tested high-fidelity prototype**, complemented by an **AI workflow anchored on the design system** (Claude Code, Figma MCP).
Working closely with engineers (front-end CSS background).

EXPERIENCE

Hustle Up · UX/UI Designer

Late 2024 — Present

Sport & fitness platform · multi-sided product (athletes, coaches, gym owners) · web & mobile

- Designed the **gym-owner management dashboard**: **~6 owner interviews** and **user testing** to prioritise real needs, business and activity data consolidated into a single cockpit with role-based access (financial / coach).
- Built the **design system** from a heterogeneous existing base: **44 documented components** on a semantic token layer, across **4 themes** (Athlete Light/Dark, Owner, Coach), integrated down to code with engineers.
- Built an **AI-powered design workflow**: mockup generation anchored on the design system and refined in the codebase with **Claude Code & Figma MCP**.
- Designed, on the athlete mobile app, onboarding (capturing information reused to personalise support) and the "fitness test" (assessing physical activity level), to engage athletes in the app and open a path toward coach follow-up, plus mobile booking and coaching features.
- Collaborated with another designer, 2 POs, the CEO, and web/mobile engineers.

ISYBUY (formerly IBAT) · UX/UI Designer

2018 — 2024

B2B procurement & operations SaaS · web & field · pivot from construction to mid-market buyers

- Designed **3 B2B SaaS apps** (procurement, time management), web and mobile, with **user testing** and a solid NPS.
- Designed for a **full chain of roles** on one platform: buyers (purchasing optimisation, **CSR criteria**, multi-criteria **sourcing**), site managers and team leads ordering from the field, and employee time-tracking under collective-agreement rules.
- Supported the shift **from a vertical product to a generic white-label platform**: **maintained design system**, navigation redesign across complex menus, **data-dense B2B views** built to hold any client's data, product KPI tracking.
- Also held **mobile lead** and **front-end developer (CSS)** hats, guaranteeing design-to-code consistency and working hand-in-hand with engineers.

SKILLS

Product Design & data-dense UI · Dashboards & business interfaces · Design systems & design tokens · Wireframing → high-fidelity & prototyping · User research (interviews, usability testing, A/B, SUS) · AI workflow (Claude Code, Figma MCP) · Front-end awareness (CSS) · English B2

TOOLS

Figma (+ MCP) · Claude Code · Adobe XD · Useberry · Clarity · Hotjar · Jira

EDUCATION

MSc Computer Science — Human-Computer Interaction
Université Paul Sabatier & ENAC, Toulouse
2015 — 2018

BSc Computer Science
Université Bordeaux 1
2013 — 2015

INTERESTS

Hyrox & running · Strength training · Cinema · Cooking · Board games
